

Data Structures Cheat Sheet

1. Array

Fixed-size sequential memory. Access: $O(1)$, Insert/Delete: $O(n)$, Memory: contiguous.

2. Linked List

Nodes with data and pointers. Access: $O(n)$, Insert/Delete: $O(1)$ at head.

3. Stack

LIFO. Push/Pop/Peek: $O(1)$. Used in backtracking, expression eval.

4. Queue

FIFO. Enqueue/Dequeue: $O(1)$. Used in task scheduling.

5. HashMap

Key-value with hash. Avg $O(1)$, Worst $O(n)$. Collisions handled by chaining/open addressing.

6. Binary Tree

Hierarchical. BST: $\log n$ ops if balanced. Used in sorting, range queries.

7. Heap

Binary Heap for priority queues. Insert/Delete: $O(\log n)$, Peek: $O(1)$.

8. Trie

Prefix tree for strings. Insert/Search: $O(L)$. High memory usage.

9. Graph

Nodes and edges. Use BFS/DFS. Represented via adjacency list/matrix.

10. Set

Unique items. HashSet: $O(1)$, TreeSet: $O(\log n)$. Used for deduplication.

Quick Big-O Table

| Operation | Array | LinkedList | Stack/Queue | HashMap | BST | Heap | Trie |
|-----------|--------|------------|-------------|---------|-------------|-------------|--------|
| Access | $O(1)$ | $O(n)$ | $O(n)$ | $O(1)$ | $O(\log n)$ | $O(n)$ | $O(L)$ |
| Insert | $O(n)$ | $O(1)$ | $O(1)$ | $O(1)$ | $O(\log n)$ | $O(\log n)$ | $O(L)$ |
| Delete | $O(n)$ | $O(1)$ | $O(1)$ | $O(1)$ | $O(\log n)$ | $O(\log n)$ | $O(L)$ |
| Search | $O(n)$ | $O(n)$ | $O(n)$ | $O(1)$ | $O(\log n)$ | $O(n)$ | $O(L)$ |
